Problem Statement :

Solution Overview

- What is your proposed solution?
- What differentiates your approach from traditional candidate matching systems?

JD Understanding & Candidate Evaluation

- What are the key requirements extracted from the JD?
- Which candidate signals are most important for determining relevance? / How does your solution evaluate candidate fit beyond keyword matching?

Ranking Methodology

- How does your system retrieve, score, and rank candidates?
- What models, algorithms, or heuristics are used?
- How are multiple candidate signals combined into a final ranking?

Explainability & Data Validation

- How are ranking decisions explained?
- How do you prevent hallucinations or unsupported justifications?
- How does your solution handle inconsistent, low-quality, or suspicious profiles?

End-to-End Workflow

- What is the complete workflow from JD input to ranked candidate output?

System Architecture

Results & Performance

- What results or insights demonstrate ranking quality?
- How does your solution meet the challenge's runtime and compute constraints?

Technologies Used

- What technologies, frameworks, and tools were used and why were they selected for this solution?
